

CSE111: Orientation to Computing

Continuous Assessment 2 (CA2) Report: EDU-Revolution Initiative

1. Student Details

Particular	Details
Student Name	ARYAN PAL
Registration Number	12627254
Roll Number	1
Section	K3P26WK
Term	Term 1 (CSE - AI & ML)
Selected EDU-Revolution Benefit	Revenue Generation (Freelancer - Student Driven)
Date of Registration	September 25, 2026
Reference ID(s)	Pending Approval (Student Driven - Freelancer)

2. Introduction to EDU-Revolution

The **EDU-Revolution** framework established by Lovely Professional University (LPU) is an outcome-based academic initiative designed to award student achievement in practical, experiential, and industry-aligned domains outside traditional classroom lectures. Traditional academic curricula focus primarily on theoretical knowledge; EDU-Revolution bridges the gap between classroom theory and real-world execution by recognizing self-directed technical and creative achievements, awarding academic credits, CA marks, and official university endorsement.

The core objectives and significance of the EDU-Revolution ecosystem include:

- **Skill Monetization & Industry Readiness:** Encouraging students to develop directly deployable technical, creative, and managerial skill sets that carry commercial value.
- **Self-Directed Skill Acquisition:** Empowering students to chart personalized learning journeys through freelance work, live industry projects, open-source development, and specialized certifications.
- **Early Portfolio Curation:** Facilitating the early development of verified project repositories, design portfolios, and public profiles prior to campus recruitment drives.
- **Holistic Academic Assessment:** Formally integrating non-classroom accomplishments—such as client revenue, open-source pull requests, digital assets, and research papers—into university Continuous Assessment (CA) evaluation.

3. Available EDU-Revolution Benefits

The official LPU EDU-Revolution portal provides specific activity streams mapped to the Artificial Intelligence and Machine Learning (AI & ML) syllabus. Below are the exact available benefits listed on the official portal:

S. No.	Benefit / Initiative	Brief Description
1	Revenue Generation	Earning income during studies through various practical activities like Open Projects, Free Lancing, Start Ups.
2	Projects	Various projects from standardized sources that student can take up for getting hands on experience.
3	Social Media Presence	Using social media strategically to enhance academic visibility, share learning experiences, connect with professionals.
4	Recognition of Prior Learning (RPL)	Extension of course exemptions to students based on prior knowledge attained by student through earlier projects.
5	NPTEL / MOOCs	Online learning platforms that offer free or low-cost, high-quality courses from top institutions, accessible to all.

S. No.	Benefit / Initiative	Brief Description
6	Grade Upgradation (Core / Non Core)	Provision of improving a previously earned grade by through approved academic activities like technical projects.
7	Internship Beyond the Curriculum	A practical work opportunity taken outside regular academic requirements, where students apply domain skills.
8	Co-curricular / Extra curricular activities	Activities outside regular academics that help build professional or academic skills such as technical clubs.

4. Selected Benefit and Justification

Selected Benefit: Revenue Generation (*Model Category: Freelancer | Mode: Student Driven | Process: Proposed*)

Detailed Scope and Key Features

The selected initiative under the **Revenue Generation** stream establishes a self-driven freelance digital creative practice focused on 3D asset modeling, keyframe motion animation using Blender, and high-engagement visual content creation (meme marketing) for online communities, gaming servers, and digital brands. Modern digital marketing and tech ecosystems rely heavily on custom 3D graphics and viral visual assets to maintain brand distinction. The key pillars of this proposal are:

- **3D Visual Asset Design:** Modeling low-poly and high-poly 3D assets, texturing, and rendering high-resolution visual elements using Blender.
- **Basic Motion Animation:** Constructing short 3D loops and motion graphics suitable for social media overlays and digital media.
- **Viral Content & Meme Design:** Crafting targeted digital graphics that utilize community humor and visual trends to drive engagement for online brands.
- **Digital Portfolio Curation:** Hosting custom assets and past work on professional creative networks like Behance and ArtStation.

Eligibility, Registration Process, and Alignment

Eligibility: Requires proficiency in 3D rendering software (Blender), graphic layout tools, raw asset organization, and active profiles across freelancing and creator networking channels

(Upwork, Fiverr, Discord).

Registration Process: Navigated to the official EDU-Revolution portal via UMS e-Connect, selected *"Any Other"* under Proposed Initiative by Faculty, designated *Freelancer* as Model Category, *Student Driven* as Mode, and *Proposed* as Process, followed by submitting a detailed >500 character project description.

Academic & Career Justification: As a Computer Science student specializing in Artificial Intelligence and Machine Learning, working with 3D modeling and visual content pipelines directly strengthens understanding of computer vision principles, 3D coordinate geometry, matrix transformations, spatial rendering pipelines, and generative media workflows. Furthermore, managing freelance client relationships, scoping deliverables, and setting timelines builds essential entrepreneurial discipline.

5. Action Plan

S. No.	Activity / Action	Timeline	Expected Result
1	Asset Curation & Portfolio Setup Organize raw Blender renders and meme graphic files into a public Google Drive / Behance repository.	Weeks 1 – 2	Live portfolio link containing verified sample assets and renders.
2	Skill Upgrade & Demo Renders Develop 2 new 3D low-poly models and 1 loop animation in Blender to demonstrate current technical scope.	Weeks 3 – 4	Expanded portfolio featuring high-resolution 3D renders and animation files.
3	Outreach & Client Pitching Establish marketplace profiles (Fiverr/Upwork) and conduct direct outreach to Discord community creators.	Weeks 5 – 7	Active freelancing channels and documented proposal submission logs.

S. No.	Activity / Action	Timeline	Expected Result
4	Project Execution / Case Study Fulfill live client orders or complete a full concept 3D marketing campaign for a gaming brand.	Weeks 8 – 10	Completed 3D visual deliverables, .blend source files, and project execution case study.
5	Documentation & Report Compilation Assemble communication logs, portfolio links, and render outputs for final Edu-Revolution assessment.	Weeks 11 – 12	Final comprehensive report and presentation ready for Viva Voce evaluation.

6. Expected Impact

Participation in this initiative delivers multifaceted benefits across key academic and professional areas:

- **Academic Enrichment:** Solidifies foundational understanding of computer vision, computer graphics, 3D spatial transformations, visual rendering algorithms, and digital media processing pertinent to AI & ML.
- **Skill Development:** Builds practical capability in 3D modeling, lighting, texturing, animation timing in Blender, alongside digital media strategy and social engagement design.
- **Career Preparation:** Establishes an active, verified visual portfolio on Behance/ArtStation, demonstrating proactive skill execution and creative independence to placement recruiters.
- **Professional Development:** Cultivates core professional habits including client pitch drafting, negotiation, project scoping, deadline adherence, and independent problem-solving.

7. Supporting Evidence & Viva Voce Quick Reference

Viva Voce Assessment Preparation Guide (8 Marks)

Q1: What is the main purpose of the EDU-Revolution scheme at LPU?

Answer: It is an outcome-based evaluation system that awards academic marks and recognition for practical learning, freelancing, projects, and skills acquired beyond traditional classroom lectures.

Q2: Why did you choose "Proposed" and "Student Driven" under Revenue Generation?

Answer: Because this is an independent freelancing project based on my 3D Blender modeling and viral graphic design skills, focused on generating market-based revenue during my degree.

Q3: How does this project relate to your AI & ML stream?

Answer: Working with 3D models in Blender connects directly with computer vision, spatial coordinate geometry, 3D transformations, and visual graphics pipelines used in artificial intelligence and generative media.

Q4: What will you submit for evaluation if you do not generate client revenue by term end?

Answer: A verified online portfolio featuring completed 3D renders/animations, screenshot logs of marketplace pitch outreach, and a comprehensive concept brand case study demonstrating full technical capability.
